

Powershell - Move Folder

Cmdlet

Move-Item cmdlet is used to move a directory by passing the path of the directory to be moved and destination path where the folder is to be moved.

Example 1

In this example, we'll move a folder D:\Temp\Test to D:\Temp\Test1

Type the following command in PowerShell ISE Console

```
Move-Item D:\temp\Test D:\temp\Test1
```

You can see the Test directory moved to Test1 directory in Windows Explorer.

Example 2

In this example, Create a file test.txt in Test folder in D:\Temp\ and then run the same command.

Type the following command in PowerShell ISE Console

```
Move-Item D:\temp\Test D:\temp\Test1
```

You can see the content of Test1 directory in Windows Explorer where it contains both the Test directory and test file.
