Powershell - Create File

Cmdlet

New-Item cmdlet is used to create a file by passing the path using -Path as path of the file and -ItemType as File.

Example

In this example, we'll create a file in D:\Temp\Test Folder with name "Test File.txt"

Type the following command in PowerShell ISE Console

```
New-Item -Path 'D:\temp\Test Folder\Test File.txt' -ItemType File
```

Explore our **latest online courses** and learn new skills at your own pace. Enroll and become a certified expert to boost your career.

Output

You will see the following output.

```
Directory: D:\temp

Mode              LastWriteTime     Length Name
----              -------------     ------ ----
-a---        4/3/2018   7:14 PM          0  Test File.txt
```

You can see the same in Windows Explorer where Test File.txt is created in D:/temp/Test Folder directory.
